Sr. Software Engineer and Engineering Manager

Jan 2018 – present
Ahemdabad, India

PROJECTS

Hafnia

Hafnia offers detailed financial data for tanker management, allowing users to filter by Pool, Segment, Yards, Pool Owners, and Vessels. It features interactive charts for better data interpretation and provides access to earnings and sustainability records. Users receive notifications for new Performance Summaries, Market Data, Pool Data, and Vessel Data uploaded via the admin panel. Additionally, Market Data and Pool Documents are available for download.

Roles & Responsibilities:

- Enhanced the **PoolPoint Distribution, Earnings, and Performance Summary** screens.
- incorporated **Firebase** for push notification services.
- Implemented **charts** to enhance data visualization.

- Preserved clear and effective communication with clients to ensure a thorough understanding of project requirements.

IcareVIP

This medical app caters to both patients and doctors. Doctors can manage their availability via a web app, while patients can book appointments for Home Visits, Clinic Visits, or Video Consultations based on availability. The system sends notifications for appointment confirmations, reminders, and video consultation alerts when a user joins a call.

Roles & Responsibilities:

- Developed the boilerplate and handled all CRUD operations.
- Executed push notifications.
- Incorporated video consultation functionality.
- Setup the payment system, supporting Credit/Debit Card and PayPal transactions.
- Served as Lead Developer, facilitating client communication to gather and address requirements.
- Added CI/CD pipelines for automated build generation.

Beem

Beem is a mobile application available on both Android and iOS, expanded for tourists and suppliers. Tourists can plan trips and add activities based on their location, while suppliers can create activities, set availability, and offer tours.

Roles & Responsibilities:

- Developed the boilerplate for both Beem Tourist and Beem Supplier apps.
- Managed the CRUD operations for tours and trip activities.
- applied the trip booking and payment flow.
- Incorporated real-time chat using sockets for tourist-supplier communication.
- enforced location-based filters for relevant tour recommendations.
- Provided client communication and support.

TomCom

Tomcom is a school management app used by London Thomas School, supporting three user roles: parent, guardian, and teacher.

- **Parents & Guardians** receive push notifications about school activities and events and can download or purchase activity photos.
- **Teachers** can add student details and upload event photos.

Roles & Responsibilities:

- Directed Firebase Storage for storing student activity photos.
- Supervised the purchase module for downloading paid photos.
- Controlled push notifications for school activities and events.
- direct client communication for updates and requirement gathering.
